

SINONATRIX AEQUIFASCIATA (Equal-banded Watersnake). VIETNAM: NGHE AN PROVINCE: Vicinity of Ky Son. November 1986. Hoang Xuan Quang and students. Zoologisches Forschungsinstitut und Museum Alexander Koenig, Bonn, Germany (ZFMK 82923). Verified by Wolfgang Böhme. *Sinonatrix aequifasciata* had long been known only from southern China (Zhao and Adler 1993. Herpetology of China. SSAR, Oxford, Ohio). Recently, Orlov et al. (2000. Russ. J. Herpetol. 7:69–80) recorded the species from Tam Dao Mountain Ridge for the first time for Vietnam, and stated that it occurs in central and northern Vietnam but without referring to any concrete evidence. This specimen represents the first voucher for the Nghe An Province. This juvenile (SVL 170 mm; tail 54 mm) exhibits coloration, pattern (23 dark dorsal bands on body, 13 on tail), and scale counts characteristic of *S. aequifasciata*.
